

ZXM-SERIES

AMPLIFIERS

KICKER's newest trio of marine amplifiers provides dependability and flexibility for any high-performance audio system on the water. Special moisture-resistant features help withstand electronics-damaging weather while powering up an incredible sounding stereo system. Each model features moisture-resistant conformal coating on the interior circuit boards, ABYC E-11.14.5.5 compliant connections, and SAE J1171 compliant fuses.

KICKER is a member of the American Boat & Yacht Council (ABYC), a leader in education for the marine industry, and the National Marine Manufacturers Association (NMMA), which supports the U.S. recreational boating industry.

225 Watts RMS x 2 @ 2 Ω

ZXM 350.4
90 Watts RMS x 4 @ 2 Ω

ZXM 700.5
90 Watts RMS x 4 @ 2 Ω
420 Watts RMS x 1 @ 2 Ω

MARINE AUDIO 2010

KICKER® | **LIVIN' LOUD**

SPEAKERS

With KICKER Marine speakers, expect sealed audio components that are UV-treated and splash- and spray resistant, featuring water-tight locking terminal covers, water-resistant bolt-thru grilles, and rustproof 316L stainless-steel hardware. KICKER speakers meet or exceed industry standards for environmental humidity and corrosion,* and for material degradation due to UV exposure.** Magnetic shielding minimizes compass and gauge deviation within the dash.***

*ASTM B117 200-hour Salt Fog Testing
**ASTM G154 400-hour Accelerated UV Testing
***Excludes KM6000W and KMT6

KM6500.2 HLCD TOWER COMPONENT SPEAKER SYSTEM

KM6500 MIDRANGE DRIVERS

The world's first horn-loaded, compression-driver component system, the KM6500.2 HLCD Tower System is engineered to the highest design standards and can be installed right into existing speaker cans. What makes it different are the titanium-diaphragm, compression-horn drivers, delivering music to much broader and farther distances from the watercraft. High-efficiency, 6.5-inch midrange speakers in the HLCD System use dual neo-magnet technology to deliver maximum sound quality. These midrange drivers are also available separately as the KM6500 Midrange System for those seeking the performance of a six-driver system.

KM6500.2

KMT6 LONG-RANGE TOWER SYSTEM

This pair of aerodynamic, injection-molded ABS enclosures delivers the music way out to the skier or wakeboarder. Each enclosure holds two 6.5-inch midrange drivers flanking a long-throw compression-horn tweeter. Billet-aluminum mounting brackets adjust to seven sizes, matching most every tower or roll-bar diameter. Amp connection is provided for with a five-way, binding-post hook-up on the back of each enclosure.

KMT6

KM6250.2 COMPONENT SPEAKER SYSTEM

Remarkable sound quality is the result from this pair of 6-inch midrange speakers and premium 1-inch tweeters. The midranges are engineered using MAXBasket Geometry™, providing oversized, louder 6.5-inch speaker cones that perform in speaker baskets designed for a standard 6-inch cutout hole. The midranges also feature removable external crossovers for flexible mounting.

KM6250.2

KM-SERIES COAXIAL SPEAKERS

KICKER offers three distinct coaxial systems: the KM6200 with a pair of 6-inch mids and powerful 3/4-inch tweeters; the KM6130 with 6-inch mids and robust 1/2-inch tweeters; and the KM6000W with 6-inch mids and 1/2-inch tweeters with a basic grille design in classic white. The KM6200 and KM6130 coaxials both sport a high-metallic, silver-flake clear coat for yet a different interior look.

KM6000W

KM6200

KM6130

KM10 SUBWOOFER

This is what KICKER is known for – bulletproof bass that never quits. The injection-molded cone, Santoprene™ surround, speaker basket, and bolt-through grille are all UV-treated. The sealed motor and cone are splash- and spray-resistant. The water-tight locking terminal cover provides strain relief, insulation, corrosion prevention, and aids in ignition protection. This extremely durable 10-inch sub handles 150 watts (RMS) in freeair installations, or sealed or vented enclosures. The grille comes in a stylish high-metallic, silver-flake clear coat that matches almost any interior color scheme.

KM10

SKM10 SUB BOX

The rugged, thunderous KM10 Subwoofer also comes already loaded in this tough, molded polyethylene enclosure that provides the highest water resistance. This powerful, acoustically sealed subwoofer box is compact enough to mount in the tightest of spaces, like the driver- or passenger-side toe well or rear-seat storage area. Space-saving... yes. Reliable KICKER bass... definitely!
